

# Manage Project Reports

Reporting is one of the important features which Experitest supports.

Reports help the users to understand their test runs because it provides information like,

- Device information on which the test is run
- Detailed information of test steps with screenshots.
- Video Reports
- Information on failure

Due to these reasons, it is important for a Project Admin to Manage reports.

The following section provides information on managing reports by a Project Admin.

- [Reports Page - View all users tests](#)
- [Reporter](#)
- [Jira Integration](#)
