

# Mobile Manual Testing

Experitest allows you to manually test mobile and web applications. There is a wide array of devices that you can choose from and test on.

With the Experitest Cloud Platform you can **open a device**, **install the app** or browse to your **mobile website and start testing**. Manual testing also allows you to **monitor the behavior of your app in terms of CPU** and memory consumption, as well as its behavior under different network conditions.

## Opening Device is in Manual Mode

The device can be opened in Manual Mode by clicking the OPEN button on any device in Experitest Cloud LaunchPad.

The screenshot shows the SeeTest interface for managing mobile devices. On the left is a dark sidebar with navigation options: Dashboard, Devices, Browsers & Emulators, Automation, Execution, Reports, Applications, and Settings. The main area is titled "Mobile Devices" and features a filter bar with dropdown menus for STATUS (All), OS (All), VERSION (All), MANUFACTURER (All), and MODEL (All). Below the filters, it indicates "10/10 devices" and displays a grid of four device cards. Each card shows a device image, an "Open" button (highlighted with a red box and a mouse cursor), and an "Available" button (also highlighted with a red box). The devices listed are: eilon.grodsky's iPad (iPad Pro, iOS 12.1.1), Michaels iPhone 11.1.2 - Audio 2 (iPhone 8+, iOS 11.1.2), Xiaomi Redmi 5A (Redmi 5A), and LGE LG-H850 - Audio 1 (LG-H850). Each card also shows a region icon for "Europe - Master".

In the multi-regional cloud, region selection will appear. Please choose a region that is close to your location to filter the device and have a better experience when using devices.

### Mobile Devices

10/10 devices

STATUS	OS	VERSION	MANUFACTURER	MODEL	CATEGORY	REGION
All	All	All	All	All	All	All

- All
- Europe - Master
- n/a
- USA

**Available**

**eilon.grodsky's iPad**  
iPad Pro  
Europe - Master | iOS 12.1.1

**Available**
