

Changing Device Orientation

Device orientation i.e changing screen from **portrait to landscape** and vice versa, is an important feature and it also of utmost importance that how an application layout behaves in both orientation.

Experitest platform provides a way to change the orientation. To change the device orientation, we need to first open the device in **manual mode**.

If the device rotation lock is on, clicking on the "Change Orientation" button will have no effect.

Enabling Rotation for iOS devices

Once you opened the device in manual mode, do a swipe motion from the bottom of the device screen upwards. See demonstration on right hand side.

Bring up the menu by swipe motion and enable or disable rotation.

Enabling Rotation for Android devices

Once you opened the device in manual mode, do a swipe motion from the top of the device screen downwards. See demonstration on right hand side.

Bring up the menu by swipe motion and enable or disable rotation.
