

# Capabilities in Appium Based Tests

This section describes the available capabilities and examples for their usage.

Continuous Testing expands Appium's capabilities and allows better control over the device and test.

You can start developing a new framework, or migrate your existing Appium tests and execute them with higher performance and stability rates.

Articles below provides details about the additional capabilities that you can make use of in your tests.

- [Device Queries](#)
- [Device Setup](#)
- [Browser Setup](#)
- [Application Setup](#)
- [ChromeDriver on Android](#)
- [iOS Alerts](#)
- [Timeout Capabilities](#)
- [Override Appium Driver Log Method to Print Log Values to Console](#)
- [Network Virtualization Capabilities](#)
